

Re.: Genetically Modified Organisms

Dear Sir, Madam,

As producer of high quality vegetable seeds we herewith confirm that until now all our Plant Variety Protected varieties have been developed by means of conventional breeding techniques. Herein no use has been made of genetic manipulation. On the short term Pop Vriend does not intend to market and sell varieties which have been developed by using the above mentioned techniques. In case we might change our policy in the future we are willing to inform you in due course.

Sincerely yours,

Marc van Wanroij  
CEO Pop Vriend Seeds B.V.
